CRAFT KITS *Made Easy!*

How to build your Snowman

Use a combination 'hot glue' for the larger parts (for speed) and 'precision glue' for the finer details of the coal eyes/mouth .

The body of the snowman is hollow, when all other decoration is complete - add the pompom as a snowball flourish and stand the figure over the colour-changing electronic tea-light for a wintry light show.

To attach the head, its better to turn the bauble upside down. Apply hot glue to the bottle top body rim with extra to the inside back-side (this way the bauble topper will provide additional support for the head).

Apply hot glue to the inner of the hat brim and sit the hat on to the head, making sure there is enough room for the facial features. A slight tilt backwards works well. Add the hat's embellishments with small amounts of hot glue (as provided: a band and bow/flower).

Use hot glue to attach the carrot nose.

It is advisable to use quick-drying precision glue to attach the coal eyes/mouth parts. Make sure you do not lose these small feature details. You may need to use some tweezers for the smaller pieces and work over a tray.

Use small dabs of hot glue anchor the scarf around the neck at strategic points. Tie the scarf for best effect and attach the scarf lengths to the body to hold it in place. Then attach the buttons to the body - and that's it, you're done!

The purchase of this craft kit contributes to AVHT fundraising to support Brigg Heritage Centre. Build quality is the responsibility of the individual crafter and results will vary.
